Office Action Summary

Application No.

09/864,593

Applicant(s)

LINNAKANGAS ET AL.

Examiner

Thanhnga B. Truong

Art Unit

2135

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05/24/2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 2-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 8-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 24 May 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 03/26/02.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ylonen et al (US 6,438,612 B1), and further in view of Moles et al (US 6,725,056 B1).

a. Referring to claim 8:

i. Ylonen teaches:

(1) at least one IP forwarder arranged to receive IP packets each of which is associated with a Security Association (SA), the at least one IP forwarder is further arranged to determine the destinations of the packets, and to forward the packets to their destinations [i.e., referring to Figure 3, for Ylonen's invention to be applicable we will assume that some arbitrary protocol (where IP forwarder could include in this protocol) exists for setting up a context for securely tunneling data packets from the transmitting device 301 through the connection 303 to the receiving device 302. As an example we will consider the IKE and IPSEC protocols mentioned previously. Setting up said context will then correspond to having a negotiation between the two devices, during which negotiation they will first authenticate themselves to each other and thereafter agree upon a shared secret, an authentication and/or encryption method to be used for the communication and on a security parameter index (SPI) value. The results of the negotiation will be locally stored at both devices, which is illustrated in FIG. 3 with the schematic memory blocks 304 and 305 (column 5, lines 56-67 through column 6, lines 1-2). In addition, Using the language of the IKE and IPSEC protocols, the result of the negotiation between the devices 301

and 302 is a security association (or a well-defined group of security associations) (column 6, lines 58-61)];

(2) a plurality of security procedure modules coupled to the IP forwarder(s) and arranged to implement security procedures for received IP packets in parallel [i.e., referring to Figures 6 & 7, it is possible to have in each physical computer device 601 only a single module 602 performing IPSEC processing, and to have e.g. all virtual routers 603a, 603b and 603c in a physical router share the same IPSEC module. In an alternative architecture according to FIG. 7 each virtual router 703a, 703b and 703c can have its own IPSEC processor 702a, 702b and 702c, but the different processors have a shared data structure 704 that they use for allocating SPI values (either by actually having a single store for SAs or SPIs, or by checking the SPIs used by every other virtual router before allocating an SPI value). In a third alternative architecture the range of possible SPI values may be partitioned so that the virtual router identifier is encoded into the SPI value (either in a fixed number of bits, or using any suitable arithmetic coding method to combine a virtual network identifier and a SPI index). Variations and intermediate forms of these architectures can also be used. When there are multiple IPSEC processing modules, and the SPI can be used to identify the IPSEC processing module, no explicit virtual network identifiers are needed (column 8, lines 46-66)]; and

(3) a security controller arranged to allocate negotiated SAs amongst the security procedure modules and to notify the security procedure modules and the IP forwarder(s) of the allocation, whereby the at least one IP forwarder can send IP packets to the security procedure module implementing the associated SA [i.e., Figure 4 shows more detailed view of a transmitting device 401, a receiving device 402 and two-way communication connection 403 between them. Both the transmitting device 401 and the receiving device 402 have an automatic key manager block 404 and an IPSEC block 405 that communicate with a security policy database 406. We may keep the previously made assumption that the

automatic key manager blocks 404 apply the IKE protocol for setting up the security association (column 7, lines 18-26)].

ii. Although Ylonen does not explicitly mention about a security controller in Figures 3 and 4, the negotiation process that Ylonen has mentioned in these two Figures should at least include a controller included in the communication in order to establish an entire IP Security Association. However, Moles teaches:

(1) Figure 4 illustrates in greater detail provisioning security controller 265 in accordance with one embodiment of Moles' invention. Exemplary provisioning security controller 265 comprises data processor 405 and memory 410, which contains storage space for data burst-IP packet conversion application program 415, incoming traffic channel data field 420, outgoing traffic channel data field 425, incoming IP packet data field 430, and outgoing IP packet data field 435 **(column 10, lines 19-27).**

iii. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to:

(1) have included a security controller in Ylonen's invention concerning the secure transmission of data packets in a network.

iv. The ordinary skilled person would have been motivated to:

(1) have included a security controller in Ylonen's invention since it is an object of the invention that it is applicable in the course of secure tunneling of data between virtual routers irrespective of the actual method of implementing the packet authentication and/or encryption **(column 3, lines 52-55 of Ylonen).**

b. Referring to claims 9-11:

i. These claims have limitations that is similar to those of claim 12, thus they are rejected with the same rationale applied against claim 12 above.

c. Referring to claim 12:

i. Ylonen further teaches:

(1) wherein the security controller is coupled to an Internet Key Exchange (IKE) module which is responsible for negotiating SAs with peer

IKE modules, and the security controller is arranged to receive from the IKE module details of negotiated SAs [i.e., **Figure 4 is a slightly more detailed view of a transmitting device 401, a receiving device 402 and two-way communication connection 403 between them. Both the transmitting device 401 and the receiving device 402 have an automatic key manager block 404 and an IPSEC block 405 that communicate with a security policy database 406. We may keep the previously made assumption that the automatic key manager blocks 404 apply the IKE protocol for setting up the security association. Furthermore, once the negotiation between the automatic key managers 404 is complete and the new security association is set up, both the transmitting device and the receiving device enter the information describing the security association into their security policy database. The stored information is then used for the processing of individual packets (column 7, lines 18-51).**

d. Referring to claim 13:

i. Moles further teaches:

(1) wherein at least one of the at least one IP forwarder, security procedure modules, and/or security controller are implemented in software or in hardware, or in a combination of hardware and software [i.e., **the term "controller" means any device, system or part thereof that controls at least one operation, such a device may be implemented in hardware, firmware or software, or some combination of at least two of the same (column 5, lines 15-18).**

e. Referring to claim 14:

i. This claim consist a method of processing IP packets at a network networking device to implement claim 1 and is rejected by the same prior art of record.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Godwin et al (US 6, 505, 192 B1) discloses IPSec rules are searched in an improved manner to reduce processing overhead. For selected

Art Unit: 2135

connectionless protocols, packets are treated as if they were part of a simulated connection. (see abstract).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanhnga (Tanya) Truong whose telephone number is 571-272-3858.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Vu can be reached at 571-272-3859. The fax and phone numbers for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-2100.
